

# The Freedom Smart Self Cleaning Pool

Hassle free, maintenance free pools

# A clean pool 365 days of the year.

The Freedom Smart Self Cleaning Pool is a revolutionary system designed to clean your pool so you don't have to do it yourself. Our automatic cleaning technique operates by pushing pool water from one end of the pool to the other where it is then filtered and cleaned.

Our Smart Self Cleaning Pool minimises the use of chemicals and energy by efficiently circulating the water around the whole pool. Imagine having a pool that is always ready to use without the bother of conventional cleaning methods.

The Freedom Smart Self Cleaning Pool has been engineered to be the cleanest hassle free pool all year round.

## How does it work?

The water pressure from the pump pushes up the in-floor jets in a sequence which starts from the shallow end and moves along the floor to the deep end of the pool. This process forces all dirt and debris into the bottom suction grid.

After the first cycle is completed, which takes approximately two to three minutes per jet, the next cycle starts and the jets pop up at a different angle to push more dirt along the pool floor into the suction grid.

Large pieces of debris are then collected in the pump leaf basket and fine particles of dirt flow into the pool filter where they are removed from the fresh clean water that is then pumped back to your pool.

This cycle continues multiple times until the pool is completely clean, giving you the ultimate cleaning system.

During the cleaning cycle the warm surface water is mixed with the entire pool water and all cold water at the bottom of the pool is removed via the bottom suction grid. This gives you a warm, evenly heated pool to enjoy with family and friends.

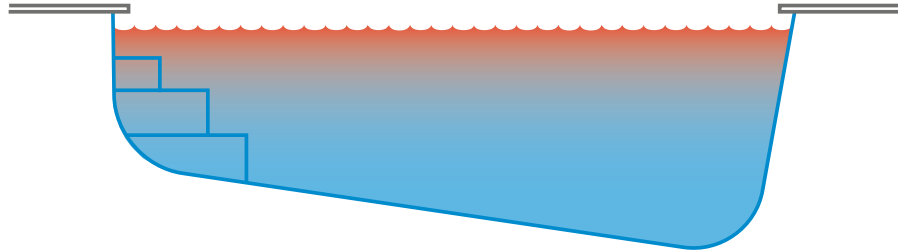

**A WARMER, CLEANER POOL  
WITHOUT HOSES OR CORDS.**

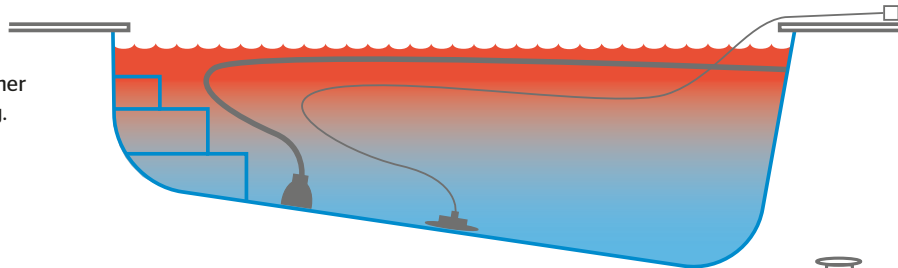

# The Freedom Smart Self Cleaning Pool

Surface hot water is blended throughout the whole pool.

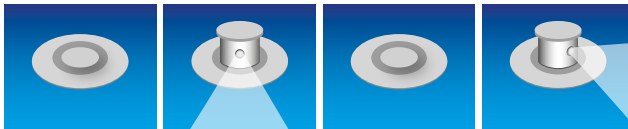

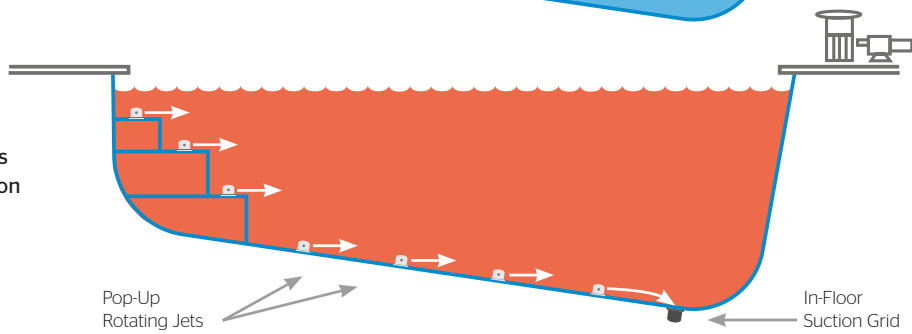

**Normal Standard Pool**  
Where hot water remains on the surface.

**Normal Standard Pool**  
With a suction and robot cleaner that interferes with swimming.

**The Freedom Smart Self Cleaning Pool**  
All the cold water and debris is removed via the in-floor suction drain, making a warmer pool.

**THE JET SYSTEM** Each in-floor jet pops up to spray warm water, moving the dirt and debris towards the suction vent. The jets retract, re-angle and repeat the process to efficiently clean the entire pool.

SAVE ON  
HEATING  
COSTS.

## Freedom Built-In Advantage

The in-floor cleaning system is built into your fibreglass pool shell during the manufacturing process in our factory. Every pop-up jet is completely concealed in the fibreglass layers during the construction process to ensure that there are no leaks in your pool after installation.

### The Advantages of owning a Freedom Smart Self Cleaning Pool

- 1 Cleans 365 days of the year, meaning you get a cleaner pool.
- 2 Heat is dispersed through every jet achieving a warmer pool all year round.
- 3 Life time warranty on in-floor jets.
- 4 The jets quickly dissolve any chemicals added into your pool, saving the amount of chemicals used.
- 5 The warm water is evenly dispersed throughout the whole pool, which means you save on heating costs.
- 6 Reduced energy and maintenance through efficient in floor jets.
- 7 Best pool water circulation on the market.
- 8 No bulky hoses and cords that interfere with your swimming.
- 9 The chemicals that are used are better dispersed giving you a cleaner pool.
- 10 It is the only hassle free pool cleaner on the market.

**BEST VALUE FOR MONEY!** When only the best will do.

## Our fully automated two pump system makes your life easier because two pumps are better than one

The two pump system is fully automatic and set on timer clocks, this means both pumps start and run at the same time without any manual intervention needed.

With a conventional one pump system a three way valve will need to be manually turned on every time it's used. Not only is this inconvenient and time consuming, but this type of system can also cause too much filter back pressure and as a result your pool performance can be adversely affected.

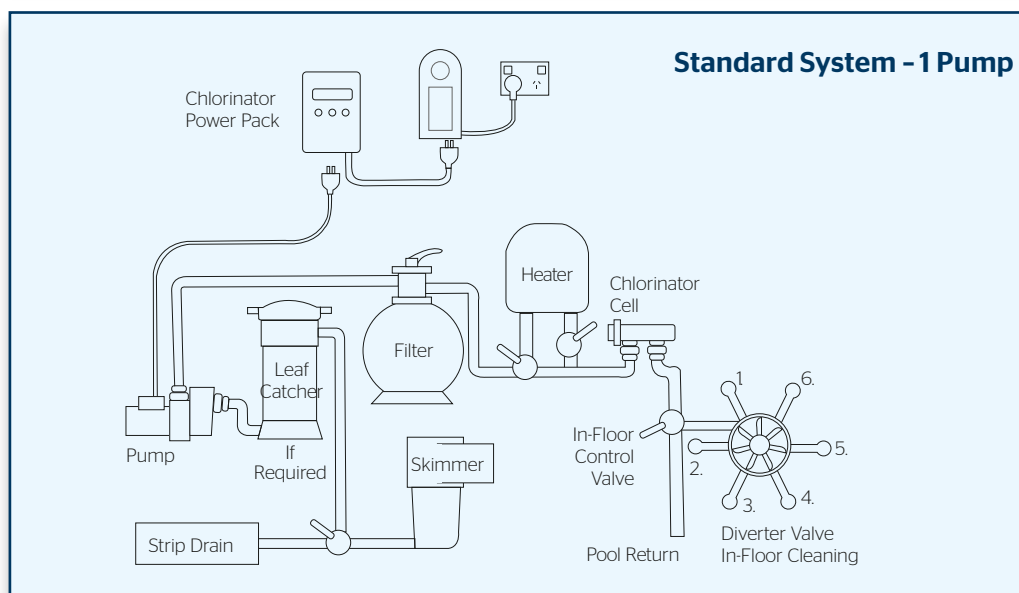

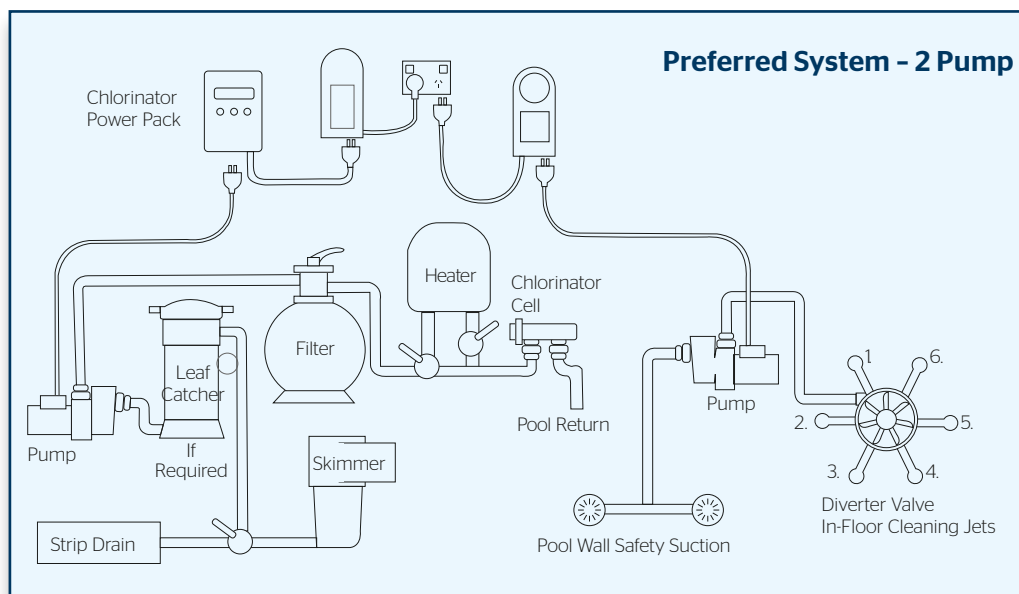

The two pump system creates less back pressure on the filter so you have increased water flow and better jet performance.

This ensures your pool receives a superior clean every time.

**Diverter Valve (6 Port)**

The heart of the cleaner.

RELAX WHILE THE POOL CLEANS ITSELF.
